COMPLETE BATHROOM PRODUCTS

- you make the decision and you have ready product to easy assemble at home, the solution is the answer for the clients needs:
- you don't have time - we have a complete bathtub for you!
- you don't have to worry about choosing individual elements of the bathtub anymore,
- we have done it for you.

WASHING AND DAILY CARE

After each bathing, the surface of the product should be rinsed with clean running water. Wipe off any remaining water with a soft cloth (do not use any cloths or sponges that contain elements in their structure rough and rubbing). Clean periodically with a soft cloth or sponge using only delicate cleaning chemicals and care for sanitary acrylic. Do not use cleaning agents containing surface-drawing elements, e.g. powders. During wetting, especially when using soap, shampoo, oil for baths etc., the surface of most bathtubs becomes more slippery! Slipper - so be careful!

CARE AND CORRECTIVE ACTIONS

Scratches (not larger than 0.2 mm) can be removed by polish up the surface with a 400 grit sandpaper, then with paper 600 and 800, until the scratches are removed. Then you should polish the surface with the polishing paste used for polishing the car's paint surface until it has a gloss. If the acrylic surface is becoming matt, it is recommended to polish surface area polishing paste until a gloss effect is achieved.
